What's New In?

Markup Assist, which has been available as a plug-in since AutoCAD LT 2013, now comes natively built-in to AutoCAD. It enables you to quickly mark up your drawings, and add the feedback to your drawing. (video: 1:15 min.) New AutoCAD Levels: Levels help you handle a large variety of objects that make up your designs, based on their importance. A Level allows you to name the level in the drawing. If you create the level before building, the title is preserved when the drawing is completed. (video: 1:55 min.) A Shared Level allows you to name the level in multiple drawings and plan. It is helpful for plan-of-the-day projects. (video: 1:55 min.) An Auto Level provides a self-generating name for the level based on the path and segments of the drawing. New Options in Path, Rectilinear and Curve In addition to the new major enhancements to objects in AutoCAD, we added several new options to paths, rectilinear and curve objects. You can now automatically create a circular arc from the corners of a polyline. You can now draw a rectangle by connecting a series of polyline or spline objects. You can now turn spline curves into rectilinear geometry by using the Rectangle tool. (video: 2:20 min.) In addition, we removed many of the options from the Paths panel to enhance efficiency when working with paths. You can now create, edit, and transform paths in one step. You can also change the path effect without disrupting the current edit mode. You can also change the fill or stroke for the path without disrupting the fill or stroke of the rest of the drawing. Better Levels: In addition to the newly added Levels, we also added better levels to help improve your object placement and sizing in large drawings. These new levels are useful in larger plans and 3D drawings. The Basic, Major and Enterprise Levels are available in the drawing area when you're designing. The Major and Enterprise Levels give you a wider range of control over your drawing object. You can choose your preferred level based on the object, the current size of the object or its position relative to other objects in the drawing area. In addition,
