A: Node.js is an open source,

This tool helps to edit a keymacro by inputting a new value. A user can select a key (eg. "3") and new value (eg. "4"). This tool will then allow you to input this value. Once done, the keymacro will have a new value. This will help you create a keymacro for Litestep. A user can select an "export keymacro" button and save this new keymacro into the current file.

LitanStudio Description: LitanStudio is designed to be a literate programming ide tool for literate programming developers. This tool will help you write your program in a more readable and maintainable way. Once a user finishes writing their program, they can "export" it into a well-formed file (including a.lit file). This tool can export programs to a.lit file (by default, it'll save the program into a.lit file), or save the program to a.pl file, or save the program to plain text file. It can also export programs to xcode to build them.

SUZEC Description: This tool is a linting tool for the syntax of your code. It is a wrapper around clang-format that can highlight indenting style issues and provide suggestions for

improvements. Litestep Description: Litestep is a literate programming framework. This tool will help you read the code (that is formatted by Litestep). Litestep Description: This tool is a test harness designed to aid in the testing of your programs. It is a wrapper around github actions, and can be used to verify git branches. ScriptRunner Description: This tool helps you run scripts in the correct mode (ie. as a code file, a test file, etc). ScriptRunner Description: This tool will check your code (if it is a.lit file) and report any code formatting errors. TextFile Description: This tool will give you a text file of all of the code (that is formatted by Litestep) from a given.lit file. TEST Description: This tool will give you a text file of your code (that is formatted by Litestep) from a given test file. UC Source Description: UC Source is an utility to convert source to uc source format. Weka Description: Weka

LSPopupEditor is a GUI version of LSPopup that is required to run Litestep. LSPopupEditor is designed to be a graphical popup editor for Litestep. This tool will help you add new popups and change existing one is very easy - popup file content is presented in a tree, where you can add/delete/edit elements, move them up/down, cut/paste into new location and then export into a well-formed file LSPopupEditor uses another internal file as a "template" (LSPopup file in the original Litestep). You can open LSPopupEditor as a temporary file (with ".lsp" extension), which can be copied to permanent Litestep's local files system. LSPopupEditor works in MS Windows only. Notes: Notes for MS Windows: LSPopupEditor uses the following Windows utilities: 1) shell32.dll 2) Shldisp.exe (installs icons with LSPopupEditor) 3) Shlwapi.dll (LSPopupEditor itself) Notes for Unix/Mac OS X: LSPopupEditor uses only Shell commands. To do this you need to have command "sh" utility available and install necessary shidisp.sh

shlwapi.sh file into your Litestep's local file system. Notes for Linux: LSPopupEditor uses only Shell commands. To do this you need to have command "sh" utility available and install necessary shidisp.sh shlwapi.sh file into
