Instead you use Photoshop to convert the file before saving it. * No industry-standard file formats are accepted. Photoshop does have an SVG plug-in, but it is limited in how it saves images. * It does not accept industry-standard file formats, which means you cannot open files from other programs. * Photoshop does not have a very intuitive layer-based editing system. * Photoshop does not have a built-in eraser. * Photoshop does not have a built-in cropping tool. * Photoshop does not have a selection tool that works in all directions. * Photoshop's color management is not very intuitive and does not work the same way as most other graphics editors. * The user interface has a lot of clutter and the most useful tools are buried deep inside the interface. * Photoshop is confusing for beginners. * It is expensive and unnecessary for most photographers, as there are other editing tools more suited for photo editing. ## Top Reasons to Use Photoshop Here are the top reasons to use Photoshop: * Photoshop can do everything other photo editing software can do; it is the industry standard. * Photoshop is the industry standard for retouching. * Photoshop's amount of options makes it more powerful than other products. * It is user-friendly.
